**A proposal by the Terminology Coordination Unit (DGTrad - EP)**

**For the workshop “BabelNet and European Resources”**

**2<sup>nd</sup> and 3<sup>rd</sup> March 2016 Schuman Building – European Parliament**

# What we can offer now...

## A collection of glossaries

## TermCoord

- **COLLECTs** glossaries in any specialised domain monitoring the web on a daily basis
- **SELECTs** the glossaries according to source, reliability and content

# What we can offer now...

## A collection of glossaries

**GLOSSARY  
LINKS**

# What we can offer now...

## A collection of glossaries

## Limits and frustrations:

- search by keyword works only in the titles of glossaries
- it doesn't search for terms in each glossary
- too many clicks and time-consuming
- user is not sure to find the term in the listed glossaries

At TermCoord  
we like to dream big

# 🔍 And we are dreaming of converting

in

a real metasearch tool

That would search for a term in all the glossaries with just one

click!

# GLOSSARY SEARCH

Domain:

Languages:

Term:

SEARCH

[feedback](#)

GlossarySearch will be fed by TermCoord with new glossaries collected from the web and selected according to source, reliability and content

**GLOSSARY SEARCH**

Languages:

Term:

**SEARCH** [feedback](#)

**ADMIN**

Choose field to manage:  
(add, remove, edit and extract listing)

[Domains](#) | [Glossaries](#) | [Languages](#)

- Can be connected to any database
- Whenever...

**SORRY  
NO RESULTS  
FOUND**

it will proceed to a further research

- either as an option
- or automatically.

- It could also provide a list of candidate terms for interlinked databases

So, for example,  
when a term is not to be found in IATE...

will make you happy
